About Me

Informatics Engineering graduates have a strong background in mobile development, web development, and cloud computing. Having analytical skills and technical expertise in mobile development, web development, backend development, and cloud computing, along with strong ability to adapt quickly to changes and overcome challenges with determination.

Experience

Bangkit Academy Graduate

Mobile Development   Feb 2023 - Jul 2023

Created an intuitive and easy-to-use mobile app for the Greenix platform. Make it easy for users to access information, features and advice relating to green products and services, calculate their carbon footprint and receive alerts for carbon limit usage.

Cloud Computing   Feb 2024 - Jun 2024

Creating a back-end using JavaScript, then deploying it to Google Cloud Platform (GCP), using Cloud Run to run Docker containers, which will get the API. And Firebase as a platform with data storage, and user authentication.

Internship

Roku Japanese Cuisine   Mar 2023 - Dec 2023

Creating a website-based inventory system, managing a good data processing system. Checking incoming and outgoing goods, stock items, and making reports on these items.

Contract

NYR-Devs   Aug 2024 - Jan 2025

Creating an android application for labor preparation. This application using kotlin programming language. For application design using figma. Publishing the application to google playstore.
